### **TechnoCom Named Alliance Systems Velocity Partner**

Los Angeles, Calif. - July 18, 2002 -TechnoCom Corporation®, a provider of solutions for wireless location networks, has been named Velocity Partner by Alliance Systems, a leading distributor of voice and data interfaces for the telecommunications industry. The Velocity Partner program is reserved for Alliance System's premium, high value customers.

Alliance Systems is providing the Intel Dialogic components for TechnoCom's recently announced InterOps Safeguard Platform™, an operations support platform that enables efficient implementation and ongoing performance assurance of commercial Location Based Services (LBS) and E911 (emergency cell phone location) networks.

“We are pleased to see TechnoCom's InterOps Safeguard Platform being used by top tier wireless carriers”, says Rusty Cone, Alliance Systems President. “This is a testament to TechnoCom's ability to bring solutions that address important customer needs to market quickly and effectively.”

TechnoCom's InterOps Safeguard Platform enables the integration, deployment, optimization and management of wireless location systems, supporting all major air networks and location technologies. It is an independent platform that serves as a service and maintenance point within a carrier's Wireless Intelligent Network (WIN).

TechnoCom's InterOps Safeguard Platform includes three families of applications, including Testing, Deployment and System Management. The test applications allow individual location network elements and interfaces to be systematically isolated to enable interoperability assurance, handset certification, development and prototyping of location systems and services, subsystem verification and load testing activities.

InterOps Safeguard deployment applications off-load the burden of deployment from the carrier's production network, reducing the workload required for integration and enabling the verification of PSAP Phase II readiness, rapid site survey and regulatory compliance testing. The system management applications reduce ongoing operating cost by enabling automated call flow verification, performance monitoring, calibration, optimization and reporting.

### About TechnoCom

Founded in 1995 and headquartered in Los Angeles, TechnoCom Corporation is providing carriers, infrastructure vendors and location technology providers with the software, systems and services to implement, optimize and manage wireless E911 and commercial location systems. The company's InterOps Safeguard™ platform is an

operations support platform that streamlines deployment and performance assurance through a suite of integrated modular applications.

Seven of the largest wireless carriers in North America are TechnoCom customers.

TechnoCom offers a comprehensive suite of products and services through its Location eXchange Platform™ (LXP) enabling wireless carriers and location services providers to effectively implement, optimize and manage their location solutions. The company's management team helped pioneer wireless location technology and has deployed and operated wireless location systems around the world.
