***Triton PCS Selects TechnoCom's LocationAssurance Manager™  
for Automating Wireless E911 FCC Compliance***

*Triton PCS to Deploy Industry's First Real-Time Wireless Location OSS Platform*

**LOS ANGELES, Calif.—May 13, 2004** --TechnoCom, the leading provider of wireless location Operations Support Systems (OSS) and Business Support System (BSS) solutions, announced today that Triton PCS has selected the company's LocationAssurance Manager™ (LAM) as its automated wireless E911 location network performance management and reporting platform. Triton PCS is now the first carrier in the United States to deploy a real-time, automated wireless location performance management platform.

Responding to the needs of carriers for an automated, real-time location OSS solution, LAM validates and certifies Phase II E911 service quality by conducting, correlating and summarizing location test and performance data. LAM provides a secure, reliable and scalable solution that allows carriers to comply with FCC-mandated testing requirements without impacting either network operations or the public safety agencies that receive and respond to E911 calls.

"LAM is the only fully automated E911 location OSS solution available today that enables end-to-end location system performance management and accuracy testing. This state-of-the-art solution promises to provide substantial savings over traditional, labor-intensive methods of location service maintenance," said Glen Robinson, Triton PCS Sr. Vice President of Technology.

"Many of our markets are deployed with Phase II location technology and LAM offers real-time visibility into our location system, helping us deliver superior levels of services. Additionally, LAM is fully compliant with FCC regulatory OET testing and reporting requirements," Robinson added.

"TechnoCom continues to focus on placing greater control of location network testing and analysis in the hands of carriers," stated Masoud Motamedi, President of TechnoCom. "Service providers are seeking an automated, location-centric OSS solution to deliver decision-ready analysis critical to reducing operating costs and meeting their business and regulatory challenges. LAM meets these criteria."

Scalable, reliable and secure, LAM assesses the performance of all commercially deployed location systems across all network air-interfaces including CDMA, GSM, TDMA and iDEN™. The LAM Platform automates location performance analysis at each stage of the location process including at switches; Positioning Determination Equipment (PDEs); Mobile Positioning Center (MPCs or GMLCs); and wireless data and voice components.

### **About Triton PCS**

Triton PCS, headquartered in Berwyn, Penn, is an award-winning wireless carrier providing service in the Southeast. The company markets its service under the brand SunCom, a member of the AT&T Wireless Network. Triton PCS is licensed to operate a digital wireless network in a contiguous area covering 13.6 million people in Virginia, North Carolina, South Carolina, northern Georgia, northeastern Tennessee and southeastern Kentucky. For more information on Triton PCS and its products and services, visit the company's website at: [www.tritonpcs.com](http://www.tritonpcs.com) and [www.suncom.com](http://www.suncom.com).

### **About TechnoCom**

TechnoCom is the leading provider of wireless location Operations Support Systems (OSS) and Business Support Systems (BSS) solutions. TechnoCom offers carriers and enterprise solution providers a portfolio of wireless location service management products, carrier-grade middleware and a full suite of wireless enterprise solutions. These products enable customers to manage and leverage their wireless location infrastructures and services, reduce operating and capital costs, deliver superior levels of service, increase productivity, and rapidly deploy new revenue-generating services. Founded in 1995, TechnoCom has built a world-class team and reputation for domain leadership in location technology, wireless communications and location-based OSS and BSS. The company's customers include some of the world's largest wireless carriers and integrators including, among others, Alltel,

ARINC, Nextel, Raytheon, SAIC, Sprint, Telus, Triton PCS and Verizon. With offices in Los Angeles and San Diego, California, TechnoCom was recently named one of the 50 fastest-growing technology companies in Los Angeles by Deloitte & Touche and has received investments from Timeline Ventures, Titan Investment Partners, Third Point Management and iSherpa. For more information, please visit [www.technocom-wireless.com](http://www.technocom-wireless.com).

**About: LocationAssurance Manager - (LAM)** is the industry's first real-time Operational Support System (OSS) platform specifically designed to help carriers efficiently manage and leverage their wireless location infrastructure. LAM proactively monitors the end-to-end location system, identifies trouble spots and analyzes the quality of service experienced by the subscriber.

**About: LX Server (LXS)** is a Telco-grade intelligent location middleware platform that enables wireless operators to deploy the most cost effective array of location technologies and network elements. By dynamically matching location service requirements to the unique attributes of different location technologies LXS allows carriers to dramatically reduce capital costs, optimize location system performance and meet their E911 and commercial location service requirements.

**About: Location eXchange Platform™ (LXP)** is a unique suite of best-in-class wireless location and data solutions targeting the wireless enterprise market. Location eXchange Platform eases the complexity of wireless location and data implementations for customers seeking rapid and cost effective national or regional deployments and profitable new revenue streams. TechnoCom offers a range of solutions including middleware, hardware and complete carrier grade end-to-end systems.
